- 9 Vietnamese
- 10 Unicode
- 11 Calligraphy

Writing Makes Speech Visible

logographic	a symbol for a word or morpheme
phonographic	a symbol for a sound: phoneme or syllable

Language is primarily spoken, but writing is stable and visible — and the history of a script is a history of contact

Outline

- 1 Introduction to Writing Systems
- 2 Types of Writing Systems**
- 3 Abjad: Jawi
- 4 Alphabet: Rumi
- 5 Abugida: Thai
- 6 Featural: Hangul
- 7 Logographic: Chinese
- 8 Japanese: A Multiscript System
- 9 Vietnamese
- 10 Unicode
- 11 Calligraphy

Six Kinds of Script, All in This Region

type	a symbol writes ...	example
logographic	a morpheme	Chinese 山 <i>shān</i>
abjad	a consonant; vowels optional	Jawi (Arabic script)
abugida	a consonant with an inherent vowel ; other vowels as signs around it	Thai, Khmer, Burmese
alphabet	consonants and vowels alike	Rumi, Vietnamese
syllabary	a syllable (strictly, a mora)	Japanese kana
featural	features, inside the letter shapes	Korean Hangul

Japanese **mixes** systems: kanji, two kana, and Latin letters

Three Great Source Traditions

Chinese c. 1200 BCE	Brahmi 3rd c. BCE	Arabic 1200s CE, with Islam
Japanese kanji, kana Korean hanja Vietnamese chữ Nôm	Khmer, Thai, Lao Mon, Burmese Javanese, Balinese	Malay Jawi

Brahmi reached Southeast Asia through the south Indian Pallava script. Then two newcomers: the **Latin** alphabet with missionaries and colonial rule (Rumi, Vietnamese), and an **invention**: Korean Hangul

Where Did Brahmi Come From?

- First securely dated under **Ashoka**, 3rd century BCE
- Its neighbour **Kharoṣṭhī** (right to left) clearly comes from **Aramaic**, the Persian empire's administrative script
- Brahmi most likely had a Semitic model too, **reworked** by Indian scholars: left to right, vowel signs, long vs short vowels
- Descent from the Indus script is a minority view: that script is undeciphered and 1,500 years older

Devanagari	Thai	Lao	Khmer	Burmese	
क	ᨠ	ᨣ	ᨦ	ᦅ	all <i>ka</i>

Salomon (1998); Scharfe (2002)

Outline

- 2 Types of Writing Systems
- 3 Abjad: Jawi**
- 4 Alphabet: Rumi
- 5 Abugida: Thai
- 6 Featural: Hangul
- 7 Logographic: Chinese
- 8 Japanese: A Multiscript System
- 9 Vietnamese
- 10 Unicode
- 11 Calligraphy

Jawi: Arabic Script for Malay

السلام عليكم *as-salām 'alaykum* “peace be upon you”
 جاوي *Jawi* < *al-Jazā'ir al-Jāwī* “Java archipelago”

- An **abjad**: written right to left, short vowels usually not written
- *Jawi* also means “Malay”: *Bahasa Jawi* “Malay language”

Six New Letters for Malay

for native Malay sounds

چ ca /tʃ/

غ nga /ŋ/

ف pa /p/

گ ga /g/

ن nya /ɲ/ *nyonya*

for loanwords

و va /v/

Added to the Arabic abjad: 28 letters, plus hamza, tā' marbūṭah and lām-alif

Jawi Today

- Letters change shape by position in the word
- Written with a **reed pen** (qalam), giving the thick–thin strokes
- In decline, but still taught in Malaysian schools, and used in religion and decoration

وورما نيت بفاس

Wordnet Bahasa

Outline

- 1 Introduction to Writing Systems
- 2 Types of Writing Systems
- 3 Abjad: Jawi
- 4 Alphabet: Rumi**
- 5 Abugida: Thai
- 6 Featural: Hangul
- 7 Logographic: Chinese
- 8 Japanese: A Multiscript System
- 9 Vietnamese
- 10 Unicode
- 11 Calligraphy

Rumi: One Spelling for Two Countries

before 1972	after	
<i>ketjap</i> (Ind.), <i>kechap</i> (Mal.)	<i>kecap</i>	/tʃ/ is <i>c</i>
<i>njonja</i> (Ind.), <i>nyonya</i> (Mal.)	<i>nyonya</i>	
<i>di-buat</i>	<i>dibuat</i>	prefix joined
<i>di-rumah</i>	<i>di rumah</i>	preposition apart
<i>ke-barat²-an</i>	<i>kebarat-baratan</i>	“westernized”

Latin letters came with colonial rule: Malaysian spelling followed English, Indonesian followed Dutch, until the 1972 common spelling

Outline

- 1 Introduction to Writing Systems
- 2 Types of Writing Systems
- 3 Abjad: Jawi
- 4 Alphabet: Rumi
- 5 Abugida: Thai**
- 6 Featural: Hangul
- 7 Logographic: Chinese
- 8 Japanese: A Multiscript System
- 9 Vietnamese
- 10 Unicode
- 11 Calligraphy

Thai: An Abugida

คน *khon* person: no vowel written
 สวัสดี *sawàtdii* hello

- Each consonant carries an **inherent vowel**; other vowels are signs above, below, before or after it
- No spaces between words
- From Old Khmer, which goes back to Brahmi via Pallava

Thai Tones: Letter Class Matters

high-class ข			low-class ค		
ขา	<i>khǎa</i>	leg	คา	<i>khaa</i>	embedded
ข่า	<i>khàa</i>	galangal	ค่า	<i>khâa</i>	cost
ข้า	<i>khâa</i>	slave	ค้า	<i>kháa</i>	trade
ขาด	<i>khàat</i>	lack	คาด	<i>khâat</i>	strap

Same /kh/, same tone mark, different tone: the tone depends on the consonant's class, the tone mark and the syllable. Complicated but deterministic (Smalley 1994: 184)

Hangul: Invented, Not Inherited

안녕하세요 *annyeonghaseyo* “hello”

- Invented by **King Sejong** in the 15th century, and documented in the *Hunmin jeongeum* “The correct sounds for the instruction of the people”
- Looked down on by scholars, who used **hanja**, as a script for women, children and the uneducated
- Not widely adopted until the 19th century

One Syllable, One Block

Vowels are vertical or horizontal strokes; consonant shapes reflect where they are articulated. Image from Wikipedia (2024), cropped

The Shape Shows the Articulation

ㄱ /k/

ㄴ /n/

ㅅ /s/

ㅇ /ŋ/

ㅁ /m/

Images from Wikipedia (2024)

Add a Stroke, Add a Feature

	basic	plain	aspirated	tense
velar		ㄱ k	ㅋ k ^h	꺠 꺡
coronal	ㄴ n	ㄷ t	ㅌ t ^h	ㄸ ㅊ
bilabial	ㅁ m	ㅂ p	ㅍ p ^h	ㅃ ㅍ
sibilant		ㄹ s		ㅅ ㅆ
palatal		ㅈ tɕ	ㅊ tɕ ^h	ㅉ tɕ

ㅇ is silent at the start of a syllable and ㅁ at the end; ㅎ is h

“Before the Morning Is Over”

A wise man can acquaint himself with them before the morning is over; even a stupid man can learn them in the space of ten days.

Hunmin Jeongeum Haerye, postface of Jeong Inji, p. 27a,
translated by Gari K. Ledyard, *The Korean Language Reform of 1446*, p. 258

Well motivated, but not a direct map of phonetic features; and since sounds change in combination, the spelling is morphophonemic

Cia-Cia: Hangul for an Austronesian Language

who	80,000 speakers on Buton Island, SE of Sulawesi
before	a Jawi-like script (Gundhul), now mainly Rumi
2007	a Hangul orthography by Chun Tai-hyun (HUFS, Seoul)
2009	taught, from a textbook by Lee Ho-young (SNU)
2012	abandoned; revived around 2022
2021	a Cia-Cia dictionary in Hangul

For /v/ it revives the obsolete jamo **ㅍ** *kapyeounpieup* “light pieup”. Cia-Cia (바사찌아찌아) is Celebic, Malayo-Polynesian

Cia-Cia in Use

From Language of the Month November 2024 – Cia-Cia by L S, The National Museum of Language (online virtual museum)

Outline

- 1 Introduction to Writing Systems
- 2 Types of Writing Systems
- 3 Abjad: Jawi
- 4 Alphabet: Rumi
- 5 Abugida: Thai
- 6 Featural: Hangul
- 7 Logographic: Chinese**
- 8 Japanese: A Multiscript System
- 9 Vietnamese
- 10 Unicode
- 11 Calligraphy

Chinese: 3,000 Years and Counting

山 *shān* mountain

你好 *nǐ hǎo* hello (“you good”)

- Grew out of pictograms; in continuous use for over 3,000 years
- Characters mostly write **morphemes**
- A force for cultural and political unity, adopted by Japanese, Korean and Vietnamese
- Simplified in the People’s Republic in the 1950s

The Character for “Horse” 马

Type of Characters	Descriptions
金文 	Bronze script Jin <u>wen</u> 15th - 11th centuries B.C.E.
甲骨文 	Oracle-bone script Jia <u>gu wen</u> 12th - 11th centuries B.C.E.
大篆 	Large-seal script da <u>chuan</u> c. 8th century B.C.E.
小篆 	Small-seal script xiao <u>chuan</u> 2nd century B.C.E.
隸書 	Clerical script li <u>shu</u> 2nd century C.E.
楷書 	Standard script k'ai <u>shu</u> since c. 4th century C.E.
行書 	Running script Xing <u>shu</u> since c. 4th century C.E.
草書 	Cursive script Chao <u>shu</u> since c. 4th century C.E.

Logographic Writing: Chinese

Pictographs

女 子 口 日 月 山 川 豕 目 心 雨 田 木 龜
woman child mouth sun moon mountain river pig eye heart rain field tree turtle

Ideographs

一	二	三	上	下	中	力	凸	凹
one	two	three	above	below	middle	strength (plough)	convex	concave

Compound Pictographs / Compound Ideographs

好	安	明	家	思	牢	雷	男
good	peaceful	bright	home/family	thought	prison	thunder	man/male
(woman + child)	(woman under a roof)	(sun + moon)	(pig under a roof)	(heart + field)	(cow under a roof)	(rain cloud over a field)	(field + strength)

Most Characters Are Semantic + Phonetic

Semantic-phonetic compounds

	phonetic component				
	古 gǔ	扁 biǎn	敖 áo	旁 páng	堯 yáo
semantic component (radical)	人 (person)	偏 piān	傲 ào	傍 bāng	僥 jiào
	言 (words)	諛 piān	謗 ào	謗 bàng	謔 náo
	虫 (insect)	蛄 gū	螯 áo	螃 páng	蟯 ráo
	金 (metal)	鈷 gū	鏊 áo	鎊 bàng	鐃 náo
	(to guess)	(biased)	(proud)	(beside)	(lucky)
	(commentaries)	(to quibble)	(to slander)	(to libel)	(to argue)
	(mole cricket)	(bat)	([crab's] nippers)	(crab)	(worm)
	(cobalt)		(griddle)	(pound sterling)	(cymbals)

The **radical** hints at meaning, the **phonetic** at sound — but irregularly, so they must be memorized. 97% of characters are phonetic compounds (Sproat 2010); other estimates are lower (Wang, p.c. 2013)

Chữ Nôm: The Same Trick for Vietnamese

巴	<i>ba</i>	sound
三	“three”	meaning
= 	<i>ba</i>	“three”

The finished character cannot be printed here: it is in CJK Extension B, which these fonts lack, so you get a **tofu** box (see Unicode, later)

Chinese Characters for Other Sinitic Languages

- The script began with **Old Chinese**, c. 1200 BCE
- The modern standard written language is based on **Mandarin**, so phonetic hints fit Mandarin, not Cantonese or Hokkien
- Literacy in Cantonese or Taiwanese assumes the Mandarin standard
- Many Cantonese words and particles have no standard character

Writing Cantonese: Three Strategies

new characters	哋 <i>deih</i>	plural: 𩶛 “mouth” + 地 <i>deih</i>
sound-alikes	果度 for 嗰度	“there”
Latin letters	D for 啲	“of”

Because Cantonese is mainly spoken, its spelling varies a lot

Workarounds in Practice

你 喺 嗰度 好 喇,

你 o係 果度 好 la,

you be.at there good SFP

千祈 咪 搞 佢 啲 嘢

千祈 咪 搞 佢 D 野

on.no.account don't mess.with 3SG POSS stuff

“You’d better stay there, and under no circumstances mess with their stuff.”
[yue]

Second line: o for the 口 radical, D for 啲, 果度 for 嗰度

Cantonese Borrows More

Cantonese		English	Mandarin	
BB	<i>bìh bī</i>	baby	婴儿	<i>yīng'ér</i>
巴士	<i>bā sí</i>	bus	公交车	<i>gōngjiāochē</i>
拜拜	<i>bāai baai</i>	bye bye	再见	<i>zàijiàn</i>
沙展	<i>sā jín</i>	sergeant	排长	<i>páizhǎng</i>

English influence: Cantonese uses more loans (as does Singapore Mandarin), alongside Mandarin vocabulary

Outline

- 1 Introduction to Writing Systems
- 2 Types of Writing Systems
- 3 Abjad: Jawi
- 4 Alphabet: Rumi
- 5 Abugida: Thai
- 6 Featural: Hangul
- 7 Logographic: Chinese
- 8 Japanese: A Multiscript System**
- 9 Vietnamese
- 10 Unicode
- 11 Calligraphy

Japanese Mixes Scripts

kanji	lexical roots	山 <i>yama</i> “mountain”
hiragana	endings, particles	こんにちは <i>konnichiwa</i>
katakana	loans, mimetics, emphasis	シャツ <i>shatsu</i> “shirt”
rōmaji	abbreviations, brands	T

(1) 彼女 は Tシャツ を 着て いる

kanojo wa T-shatsu o ki-te iru

she TOP T-shirt ACC wear-CONJ PROG

“She is wearing a T-shirt.” [jpn]

Two Kana, Two Origins

hiragana	cursive forms of whole kanji
katakana	parts of kanji

Both chose kanji with a suitable pronunciation. Both are **moraic syllabaries**:
ん and small っ each count as one mora

Hiragana: A Moraic Syllabary

平仮名 (ひらがな) hiragana

a	あ	安	i	い	以	u	う	宇	e	え	衣	o	お	於
ka	か	加	ki	き	幾	ku	く	久	ke	け	計	ko	こ	己
sa	さ	左	shi	し	之	su	す	寸	se	せ	世	so	そ	曾
ta	た	太	chi	ち	知	tsu	つ	川	te	て	天	to	と	止
na	な	奈	ni	に	仁	nu	ぬ	奴	ne	ね	祢	no	の	乃
ha	は	波	hi	ひ	比	fu	ふ	不	he	へ	部	ho	ほ	保
ma	ま	末	mi	み	美	mu	む	武	me	め	女	mo	も	毛
ya	や	也				yu	ゆ	由				yo	よ	与
ra	ら	良	ri	り	利	ru	る	留	re	れ	礼	ro	ろ	呂
wa	わ	和	wi	ゐ	為				we	ゑ	恵	wo	を	遠
												n	ん	无

Katakana: A Moraic Syllabary

片仮名 (カタカナ) katakana

a	ア	阿	i	イ	伊	u	ウ	宇	e	エ	江	o	オ	於
ka	カ	加	ki	キ	幾	ku	ク	久	ke	ケ	介	ko	コ	己
sa	サ	散	shi	シ	之	su	ス	須	se	セ	世	so	ソ	曾
ta	タ	多	chi	チ	千	tsu	ツ	川	te	テ	天	to	ト	止
na	ナ	奈	ni	ニ	二	nu	ヌ	奴	ne	ネ	祢	no	ノ	乃
ha	ハ	八	hi	ヒ	比	fu	フ	不	he	ヘ	部	ho	ホ	保
ma	マ	万	mi	ミ	ミ	mu	ム	牟	me	メ	女	mo	モ	毛
ya	ヤ	也				yu	ユ	由				yo	ヨ	與
ra	ラ	良	ri	リ	利	ru	ル	流	re	レ	礼	ro	ロ	呂
wa	ワ	和	wi	ヰ	井				we	エ	恵	wo	ヲ	乎
												n	ン	无

Extending the Kana

dakuten 濁点゛	voicing	か ka → が ga
handakuten 半濁点゜	voiceless /p/	は ha → ぱ pa
yōon 拗音	palatalized	き + や → きゃ kya
gōyōon 合拗音	labialized	くわ kwa (Okinawan)
sokuon 促音	geminate	さっか sakka

濁点 *dakuten* is the mark; 濁音 *dakuon* is the voiced sound it writes

Kanji Tell Homophones Apart

こうしょう *kōshō*

交渉 negotiation

工廠 arsenal, workshop

鉱床 ore deposit

Japanese has few distinct syllables, so many homophones: WWWJDIC lists 44 entries for *kōshō*. Context picks the word, and the kanji

One Character, Many Readings: 明

reading	from		example
kun	native Japanese	<i>aka(rui)</i>	明るい <i>bright</i>
go-on	Wu, 5th–6th c.	<i>myō</i>	明日 <i>myōnichi</i> tomorrow
kan-on	Tang, 7th–9th c.	<i>mei</i>	説明 <i>setsumei</i> explanation
tō-on	Song and Ming	<i>min</i>	明朝 <i>minchō</i> Ming dynasty
nanori	names	<i>Akira</i>	

Kanjidic gives 明 3 on, 10 kun and 11 name readings; Chinese and Korean have one each: *míng*, *myeong*.

<https://www.edrdg.org/cgi-bin/wwwjdic/wwwjdic?1B>

Why So Many Readings?

- Kanji arrived from the 5th century, **with** Chinese pronunciations: **on** readings, in waves from different periods and regions
- Many already had a native word: **kun** readings
- Compounds tend to use on (火山 *ka-zan* “volcano”), single kanji kun (山 *yama*)

The Cost: Memory, and Reforms

1946	Tōyō	kanji: 1,850
1981	Jōyō	kanji: 1,945
2010	Jōyō	kanji, revised: 2,136

- An educated adult knows about 2,000 kanji, each with several readings: years of study
- Names and literature still use rarer kanji
- Typing means choosing among homophones; handwriting skills suffer

Outline

- 1 Introduction to Writing Systems
- 2 Types of Writing Systems
- 3 Abjad: Jawi
- 4 Alphabet: Rumi
- 5 Abugida: Thai
- 6 Featural: Hangul
- 7 Logographic: Chinese
- 8 Japanese: A Multiscript System
- 9 Vietnamese**
- 10 Unicode
- 11 Calligraphy

Vietnamese: Three Scripts in Two Thousand Years

111 BCE – 20th c.	Classical Chinese (<i>văn ngôn</i>) in <i>chữ Hán</i>
13th – 20th c.	<i>chữ Nôm</i> : Chinese-style characters for Vietnamese
17th c. on	a Latin alphabet, from Portuguese missionaries
1910	the alphabet compulsory in schools (French rule)

At first the alphabet was used mainly in the Catholic community

The Vietnamese Alphabet

7 letters with diacritics	<ă> <â> <ê> <ô> <ơ> <ư> <đ>
5 tone marks	<à> <á> <ả> <ã> <ạ>; level tone unmarked
and they stack	<i>nhất</i> “first”

- 29 letters; sound change means different letters, digraphs and trigraphs now spell the same sound
- The North has 6 tones; the South has merged *hỏi* <ả> and *ngã* <ã> **in speech** — the spelling still distinguishes them

Outline

- 1 Introduction to Writing Systems
- 2 Types of Writing Systems
- 3 Abjad: Jawi
- 4 Alphabet: Rumi
- 5 Abugida: Thai
- 6 Featural: Hangul
- 7 Logographic: Chinese
- 8 Japanese: A Multiscript System
- 9 Vietnamese
- 10 Unicode**
- 11 Calligraphy

Unicode: Code Points Are Not Glyphs

- Unicode gives each character a **code point**; the **font** draws it
- Han unification**: Chinese, Japanese and Korean share code points, though local shapes differ

all U+9AA8

Simplified Traditional Japanese Korean

- Rare characters need a font that has them: obsolete  for Cia-Cia, and chũ Nôm (Extension B), which our fonts lack:

Calligraphy in East Asia

Valued above painting; styles run from seal and clerical script to standard, running and grass

Mi Fu (1051–1107)

Emperor Huizong of Song (1082–1135)

Japanese Calligraphy

Grass style and Zen calligraphy: fluid and abstract

別無工夫 *betsu-naku kuufuu*
nothing else but focus

一期一会 *ichi-go ichi-e*
one lifetime, one chance

Jawi Calligraphy

Based on Arabic calligraphy, and often very ornate

Arabic Calligraphy in Diwani Style

يَا أَيُّهَا النَّبِيُّ إِنَّا أَرْسَلْنَاكَ شَاهِدًا وَمُبَشِّرًا وَنَذِيرًا وَدَاعِيًا إِلَى اللَّهِ

“O Prophet, indeed We have sent you as a witness and a bringer of good tidings and a warner, and as one who invites to Allah.”

Mehmet Izzet al-Karkuki (1841–1904)

Diwani was developed under the early Ottoman Turks (16th – early 17th century)

Summary

- The region has **every type** of script: logographic, abjad, abugida, alphabet, syllabary, featural
- Most descend from **three traditions**: Chinese, Brahmi, Arabic — plus Latin, and one invention
- Scripts are **hard to change**: most countries have dropped or limited Chinese characters, but reprinting everything is a massive task
